Factory Primed Trim and Siding

Sierra Pacific can provide you with a wide range of factory primed products.

Protection...

Start from the beginning. By choosing factory primed trim and siding, you minimize or eliminate costly claims and callbacks. Most trim and sidings are installed before being primed. This manner of installation leaves the back unprotected and unsealed. When you use factory primed trim and sidings, you are using products that are protected from moisture incursion and related problems. (Limited two year warranty)

Why use factory primed trim and siding?

- Factory application assures higher quality coverage compared to on site applications.
- Coatings are applied under factory controlled conditions for better adhesion.
- All sides, edges and ends of the board are coated ensuring maximum protection of the wood fiber and stabilizing the moisture content of the wood.
- Primed wood saves time and labor costs. Up to 80% of the cost of painting is in labor. Eliminating one step reduces overall labor costs, while assuring complete coverage on all sides of your sidings and trim.

Why Acrylic Latex?

- Extensive exposure studies have confirmed that acrylic latex coatings are more durable than their oil-based counterparts.
- When acrylic latex dries it forms a flexible film that expands and contracts, unlike oil-based products that crack and become chalky.
- No more worry if the painter is a day or two behind schedule. The trim and sidings are factory protected with acrylic latex primer. (Note: Primer is no substitute for paint. It is not a finish coat.)

We offer most of the popular sidings in a variety of species, as well as custom run patterns on a quotation basis. Just ask us!
